It is a pyrimidine specific nuclease with a slight preference for U. Cytotoxin and helmithotoxin. Selectively chemotactic for dendritic cells.
Possesses a wide variety of biological activities.

-!- CATALYTIC ACTIVITY: Endonucleolytic cleavage to nucleoside 3'-phosphates and 3'-phosphooligonucleotides ending in C-P or U-P with 2',3'-cyclic phosphate intermediates.
-!- SUBCELDULAR LOCATION: Lysosomal (Probable); matrix of eosinophil's large specific granule.
-!- IISSUE SPECIFICITY: Liver, lung, spleen, leukocytes and body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             side

(By similarity).

(ATALYTIC ACTIVITY: Endonucleolytic cleavage to nucleoside 3'-
phosphates and 3'-phosphooligonucleotides ending in C-P or U-P
with 2',3'-cyclic phosphate intermediates.

WINDEFLIULAR LOCATION: Lyososomal (Probable); matrix of ecsinophil's
large specific granule (By similarity).

SIMILARITY: Belongs to the pancreatic ribonuclease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          genes.";

of AMP, that is energically less costly than
-!- CATALYTIC ACTIVITY: AMP + diphosphate = adeni
- alpha D-ribose 1-diphosphate.
-!- PATHWAY: Purine salvage.
-!- SUBCUNIT: Homodimer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUBCLATY: Belongs to the purine/pyrimidine
phosphoribosyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2.8%; Score 6; DB 1;

surface antigen 1, and coli surface antigen 3 fimbriae from

the colonization (Biolinia) and coli surface antigen 3 fimbriae from

the surface antigen (also called pili), polar filaments radiating

i. Bacteriol. 171:6372-6374(1989).

i. Bacteriol. 171:6372-6374(1989).

i. FUNCTION: Fimbriae (also called pili), polar filaments radiating

from the surface of the bacterium to a length of 0.5-1.5

micrometers and numbering 100.300 per cell, enable bacteria to

colonize the epithelium of specific host organs.

i. Subunt: CFA/I FIMBRIAE ARE RATHER RIGID, THREAD-LIKE FILAMENTS OF

7. NANOMETERS. A SINGLE CRA/I FIMBRIA CONSISTS OF ABOUT 100

IDENTICAL PROTEIN SUBUNITS.

1. INDUCTION: CPA/I FIMBRIAE ARE ONLY EXPRESSED IN THE PRESENCE OF

THE POSITIVE REGULATOR CRAD.

1. SIMILARITY: TO THE CSI FIMBRIAL SUBUNIT A (CSOA).

-!- CATALYTIC ACTIVITY: AMP + diphosphate = adenine + 5-phospho-
alpha-D-ribose 1-diphosphate.
-!- PATHWAY: Purine salvage.
-!- SUBCELLUAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the purine/pyrimidine
phosphoribosyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gene encoding a potential adenine

-!- FUNCTION: Involved in disulfide bond formation. Catalyzes a late, reductive step in the assembly of periplasmic c-type cytochromes, probably the reduction of disulfide bonds of the apocytochrome c to allow covalent linkage with the heme. Possible subunit of a
                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           heme lyase (By similarity).
SUBCELLULAR LOCATION: Mostly periplasmic; anchored in the inner membrane (By similarity).
SIMILARITY: Belongs to the thioredoxin family. DSDE subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                          28-FEB-2003 (Rel. 41, Created)

"The calmodulin-ubiquitin associated genes of Trypanosoma cruzi: their identification and transcription.";
Mol. Biochem. Parasitol. 57:127-136(1993).
-!- DOMAIN: This protein has four EF-hand domains, two of which may be functional calcium-binding sites.
-!- SIMILARITY: TO OTHER EF-HAND CALCIUM BINDING PROTEINS. BELONGS TO THE EFHS SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vaccion Acids Res. 30:3927-3935(2002).

-!- CATALYTIC ACTIVITY: UMP + diphosphate = uracil + 5-phospho-alpha-
-!- CATALYTIC ACTIVITY: UMP + diphosphate = uracil + 5-phospho-alpha-
-!- COFACTOR: Magnesium (By similarity).
-!- PATHWAY: Pyrimidine salvage pathway.
-!- PATHWAY: Belongs to the UPRTase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nature 330,249-256 (1997).

-i. FUNCTION: Probably part of a binding-protein-dependent transport system for an amino acid. Probably responsible for the translocation of the substrate across the membrane.

-i. SUBCELLULAR LOCATION: Integral membrane protein (Potential).

-i. SIMILARITY: Belongs to the binding-protein-dependent transport system permease family. HisMQ subfamily.
                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-0CT-1996 (Rel. 34, Last sequence update)
